Kanban Vs Scrum

Diagram

Scrum

Kanban

Key Points:-

- Kanban is a visualization tool whereas Scrum is a Agile method. Both of them can be used together.
- In Scrum we need to follow specific process and work on specific tasks and complete it within sprints. On the otherhand, Kanban is used to visualise the work that is done by Scrum sprints.

Software Project Management

Scrum

Definition - Scrum is an agile framework for developing, delivering, and sustaining complex products, with an initial emphasis on software development, although it has been used in other fields including research, sales, etc.

It is an iterative process where teamwork is required and target is to deliver complete working feature in a given span of time. These span of time or interval are called sprint. Used when requirements are rapidly changing.

Kanban

Definition - Kanban is a scheduling system for lean manufacturing and just-in-time manufacturing.

Kanban is kind of tool which is used to visualize ~~system~~ the workflow. Major purpose of Kanban is to find blockage or bugs in the current process and resolve them.
