

# Pumping Lemma for RE

## Pumping Lemma (For Regular Languages)

- ⇒ Pumping Lemma is used to prove that a language is NOT REGULAR.
- ⇒ It cannot be used to prove that a Language is Regular.

If  $A$  is a Regular Language, then  $A$  has a pumping Length ' $p$ ' such that any string ' $s$ ' where  $|s| \geq p$  may be divided into 3 parts  $S = xyz$  such that the following Conditions must be true.

- 1)  $xy^iz \in A$  for every  $i \geq 0$
- 2)  $|y| > 0$
- 3)  $|xy| \leq p$

## Pumping Lemma (For Regular Expression)

⇒ To prove that a language is not Regular using Pumping Lemma, follow the below steps:

(we prove using Contradiction)

- Assume that  $A$  is Regular
- It has to have a pumping length (say  $p$ )
- All strings longer than  $p$  can be pumped  $|S| \geq p$
- Now find a string ' $S$ ' in  $A$  such that  $|S| \geq p$
- Divide  $S$  into  $XYZ$
- Show that  $xy^iz \notin A$  for some  $i$
- Then Consider all ~~ways~~ ways that  $S$  can be divided into  $XYZ$ .
- Show that none of these can satisfy all the 3 pumping conditions at the same time
- $S$  cannot be pumped = Contradiction

## Pumping Lemma (For Regular Languages)-Example

⇒ Using Pumping Lemma prove that the language  
 $A = \{a^n b^n \mid n \geq 0\}$  is not regular

Proof

→ Assume that A is Regular

→ It need to have a pumping length  $p$ , say  $p$

→ Choose string,  $S = a^p b^p$

$x \quad y \quad z$

→ For example,  $p=7$ ,  $\Rightarrow S = aaaaaaa bbbbbbb$

→ All the possible ways to divide  $S$  are as follows.

Case 1: The  $y$  is in the 'a' part

$\underbrace{a a a a a a a}_{x} \underbrace{a b b b b b b}_{y} \underbrace{b b b b b}_{z}$

$\rightarrow x y^i z \Rightarrow x y^2 z$   $\times$   
 $a a a a a a a a a a a b b b b b b$   
 $11 \neq 7$

Case 2: The  $y$  is in the 'b' part

$\underbrace{a a a a a a a}_{x} \underbrace{b b b b b b}_{y} \underbrace{b b}_{z}$

$\rightarrow x y^i z \Rightarrow x y^3 z$   $\times$   
 $a a a a a a a b b b b b b b b b b b$   
 $7 \neq 11$

Case 3: The  $y$  is in the 'a' and 'b' part

$\underbrace{a a a a a a a}_{x} \underbrace{a a b b}_{y} \underbrace{b b b b b}_{z}$

$\rightarrow x y^i z \Rightarrow x y^2 z$   $\times$   
 $a a a a a a a a b b a a b b b b b b b$   
not following  $a^n b^n$

Check  $|xy| \leq p, p=7$

## Pumping Lemma (For RL) - Example

⇒ Using pumping Lemma prove that the language

$$A = \{yy \mid y \in \{0,1\}^*\} \text{ is not Regular}$$

0101

### Proof

→ Assume that A is Regular

→ Pumping length say P

$$\rightarrow S = 0^P 1 0^P$$

$$P=7$$

$$xy^i z \Rightarrow xy^r z$$

000000001000000001  
∉ A

$$|y| > 0 \checkmark$$

$$|xy| \leq P = 7 \checkmark$$

Therefore: A is not Regular
