

ϵ -NFA

Epsilon (ϵ) - NFA

ϵ - NFA

\rightarrow empty Symbols / Null Symbol

$\{Q, \Sigma, q_0, \delta, F\}$

$\delta: Q \times \Sigma \cup \epsilon \rightarrow 2^Q$

Note: Every state on ϵ goes to itself.

Conversion of ϵ -NFA to NFA

Convert the following ϵ -NFA to its equivalent NFA

NFA

	0	1
(A)	{A, B, C}	{B, C}
(B)	{C}	{B, C}
(C)	{C}	{C}

⇒ Final state?

↳ Any state that can reach the final state only by seeing ϵ .

State ϵ^* input ϵ^*

ϵ -closure(ϵ^*) - All the states that can be reached from a particular state only by seeing ϵ symbol.

Conversion of ϵ -NFA to NFA - Example

\Rightarrow Convert the following ϵ -NFA to its equivalent NFA

$\epsilon^* 0 \epsilon^* \quad \epsilon^* 1 \epsilon^*$

<u>NFA</u>		0	1
\rightarrow A			
B			
C			
D			

\Rightarrow Convert the following ϵ -NFA to its equivalent NFA

$\epsilon^* a \epsilon^* \quad \epsilon^* b \epsilon^* \quad \epsilon^* c \epsilon^*$

<u>NFA</u>		a	b	c
\rightarrow P				
Q				
R				

Assignment
